EDTA chelation therapy, without added vitamin C, decreases oxidative DNA damage and lipid peroxidation

<http://chelation.me/oxidativednadamage/>

Intravenous EDTA may be safe and effective for treating patients who have implanted medicated stents. Prospective clinical trials are needed

<http://chelation.me/chelationnotaspirin/>

Chelation therapy seems to slow the progression of renal insufficiency in patients with mildly elevated body lead burden.

<http://chelation.me/renalinsufficiency/>

A statistically significant improvement in left ventricular ejection fraction occurred in patients with arteriosclerotic heart disease who received chelation therapy.

Do you have a patient with a history of myocardial infarction who is currently stable? A combo of high-dose vitamins and chelation show benefits.

<http://chelation.me/clinical-benefit/>

A 27-month course of EDTA chelation therapy retards the progression of diabetic nephropathy in type 2 diabetic patients with high-normal body lead burdens.

<http://chelation.me/diabetic-nephropathy/>

EDTA chelation leads to a 10% reduction in the degree of stenosis of a carotid artery after endarterectomy, should be used in conjunction with surgery.

<http://chelation.me/carotid-restenosis/>

EDTA chelation therapy is a viable alternative to surgery in patients with lower-extremity arterial occlusive disease.

<http://chelation.me/lower-extremity/>

EDTA chelation therapy for vascular disease actually results in fewer cardiac events than conventional primary treatment

<http://chelation.me/vascular-disease/>

In 1981, to inform physicians of the benefits of chelation therapy, Edward W. Macdonagh collected research articles containing several studies on chelation.
